

MeteoVid : Datameteo Digital Signage Platform

MeteoVid is an exciting new weather content delivery digital signage system that can display all types of real-time weather information in a quick, concise and user-friendly format.

The extensive family of weather data services offered by Datameteo is combined into a single product. With over 40 customizable options and over 30 types of weather content, MeteoVid works exactly the way you want. **“Can be styled to match your specific branding or web identity**

MeteoVid At the most basic level, is an external Flash application hosted on our servers that you simply add to your web page using a single line of JavaScript code. The weather data, maps, animations and audio are hosted on our servers so you never have to worry about performing lengthy installs or meeting a long list of requirements on your own server. **”No programming experience is required”**

MeteoVid is designed to be fully customizable and expandable. Change how it looks, how it acts, what it displays and more depending on your needs.. We can also work with you to develop highly customized solutions, such as custom slides, graphics, weather content and audio. We display an aspect ratio of 4:3

(dimensions of 800x600 640x480, 480x360 or 320x240) Other dimensions available on request.

”Fully Customizable and plug and play”

MeteoVid can support multiple languages. We currently only support Italian and English but are quickly expanding our library to support additional languages as well. **“You only need a web browser with a Flash Player 8 or higher to view MeteoVid content”**
